

# LIVESTOCK FLOATS

## LIVESTOCK FLOATS

Livestock floats are fabricated almost entirely in aluminium giving a strong but lightweight, durable construction. The livestock float is a fully welded container; the pressed side sheets are welded to box section posts at 1150mm intervals, and the floor is welded all round. The fully welded design prevents effluent from leaking through onto the trailer.

## CATTLE FLOATS

Cattle floats have one air vent at roof height and can be supplied with moveable doors or with fixed position doors with slam shut catches.

# SHEEP FLOAT FOLDING DECKS

The sheep decks are folding aluminium sheep decks, the deck is the length of the pen. The folding decks are supported by aluminium deck bars and are pressed to minimise leakage of effluent to the lower deck. The deck in the rear section is a hydraulically operated run up ramp to the second sheep deck. The cattle dividing doors are fixed position with slam shut catches. The sheep doors are incorporated in the cattle doors.
